

Two sessions move together, then source power falls

Exact simulator check using calculated values — not hardware measurements

1. Copy together, then switch

2. Source power falls only after both moves finish

EXACT CHECK

Copy both sessions

$$2 \times 100 \text{ B} \div 100 \text{ B/s} = 2 \text{ s}$$

Switch both routes

$$2 \text{ s} + 1 \text{ s} = 3 \text{ s}$$

Lower source power

$$30 \text{ W} \rightarrow 10 \text{ W at } 3 \text{ s}$$

✓ **Simulator matches every checked value**
